Prelude

> "Although the economic well-being and prosperity of the United States have progressed to a level surpassing any achieved in world history, and although these benefits are widely shared throughout the Nation, poverty continues to be the lot of a substantial number of our people. The United States can achieve its full economic and social potential as a Nation only if every individual has the opportunity to contribute to the full extent of his capabilities and to participate in the workings of society. It is, therefore, the policy of the United States to eliminate the paradox of poverty in the midst of plenty in this Nation by opening to everyone the opportunity for education and training, the opportunity to work, and the opportunity to live in decency and dignity. It is the purpose of the ACT to strengthen, supplement and coordinate efforts in furtherance of that policy."[1]

Overview of the 1980 Edition

The State Community Services Program (SCSP) has prepared and published this report in the belief that a most important prerequisite to planning programs to improve the lot of Oregon's socially and/or economically depressed people is to obtain understanding and knowledge about their socio-economic circumstances. This volume is presented with the hope that its contents help satisfy that need.

In 1972, the predecessor to the SCSP, the State Economic Opportunity Office, prepared a similar report. It was an attempt to gather and summarize data, comparable by county, which was reflective of depressed social and economic conditions. Other projects or studies were underway or completed at that time which described specific, singular conditions only such as the housing situation, the number of handicapped, or the nature and extent of the drug abuse problem. However, the 1972 edition of this report, which was drawn mostly from the 1970 Census, attempted to provide in one volume a variety of information about socio-economic phenomenon in the environment of poor people which would provide some indication of their status and living conditions. Thus, it was hoped that greater insight into the problems of the poor could be obtained. For example, the fact that an individual lives in inadequate housing may be the result of poor health which prohibits the earning of an income sufficient to provide adequate shelter. On the other hand, inadequate shelter may in fact contribute to a health problem.

If the needs of the poor are to be identified and prioritized, and resources allocated and programs mounted to treat the causes and effects of an economically depressed environment, a more comprehensive view of reality must be obtained. It is toward this end that this 1980 edition and all previous editions were planned and prepared. In addition, it is hoped that these reports will stimulate efforts toward the development of a comprehensive, standardized human resource information system. Such a system could be effectively employed to identify and describe human need areas and perhaps predict caseloads and service needs. It could also collect information useful for the evaluation of the impact of programs designed to satisfy those needs. Hopefully, this report will promote a more sophisticated perspective on the interrelationships between poor individuals and/or groups and the various environmental elements which affect them, and which, heretofore, may have been treated in isolation.

This edition, as did previous ones, attempts to convey understanding of social and economic conditions on a county by county basis through the display of indicator data reflective of some of those conditions. It is similar to the 1976, 1977, 1978, and 1979 editions in format and content with a few exceptions. The data in this edition was gathered almost entirely from sources independent of the decennial census. These sources were principally state agencies which permits the more frequent updating of the report with data as current as can be obtained. In the present format, every reasonable effort was made to eliminate shortcomings and errors of previous editions, and some improvements and refinements made. However, the producer of this volume accepts responsibility for any errors which are contained in it. We have attempted to include the best, most reliable, valid, accurate and indicative data obtainable at this time which meet the criteria on page 3. The major indicator categories are the same as those developed for the 1976 edition, and similar to those of the 1972 edition. They are as follows:

1. Population
2. Public Assistance
3. Housing
4. Health
5. Education
6. Economics
7. Social Disorganization
8. Migrant

The data components of each indicator category are the same as in the 1979 edition with a few slight changes in content and format. Before using any of the data contents of this volume, the reader is cautioned to read the section below which describes the source and nature of these data contained in this report.

Through information about the realities of socio-economic conditions, this report should enable public and private agencies, organizations and individuals to identify potential needs and problems for further detailed study. As a result they should be better able to direct their resources in a more effective and efficient manner to reduce the causes and consequences of poverty in Oregon.

Glossary 415

The Oregon State Community Services Program And The Community Action Agencies

There are close to 24 million poor people in the United States according to a study by the Census Bureau in the spring of 1976. This figure represents about 11.4 percent of the Nation's total population.

There were, according to that study, approximately 203,990 poor people in the State of Oregon. This figure represents 8.9 percent of the State's total population.

In 1964, the Office of Economic Opportunity, OEO, was created as part of the government's War on Poverty. OEO, in turn, gave birth to Community Action Agencies, CAA's, under which a myriad of other anti-poverty programs have developed. There are about 980 of these agencies strategically scattered all over the United States, 11 of which are located in Oregon.

In 1974, legislation was passed transforming the OEO into the Community Services Administration (CSA) which assumed the role and responsibilities of OEO.

What Is A Community Action Agency?

Unlike most government programs, most CAA's are non-profit community based agencies. However, local government has an option on their sponsorship. Local CAA authority is vested in a Board of Directors which operates the agency as a corporation. Low-income people are an integral part of a CAA's decision-making apparatus. At least one-third of a CAA Board of Directors must be low-income people who are elected democratically.

The Board appoints an Executive Director who hires a full-time staff (giving preference to poor people) to carry out its decisions. The staff mobilizes available resources within their community. This may take the form of encouraging new legislation; fund-raising drives; petitioning for grants; developing new program approaches to old problems; or simply taking advantage of existing programs.

Poor people, with a common interest or problem, are encouraged to form organized groups. They will have full support of a CAA to upgrade their standards of living and resolve problems within their own communities. CAA's Help people help themselves through advice on issues; financial aid; a base of operation; use of equipment; transportation; education; and training.

What Is The Role Of The State Community Services Program?

The Oregon, State Community Services Program acts as a liaison between CAA's and state and federal government, performing the following functions:

1. Advising the Governor, other State agencies and CSA regarding the causes and conditions of poverty in Oregon and programs developed to address poverty.
2. Furnishing special technical assistance to CSA grantees and potential grantees, local government and other community groups, in developing, conducting and administering programs to alleviate poverty.
3. Coordinating anti-poverty programs for a unified approach to the problems of the poor.
4. Marshal and focus resources, particularly at the state level, to

assist CAA's and other anti-poverty efforts within the state.

5. Operate special research and demonstration programs as well as receive funds for them.
6. Receive other public or private funds to operate, or delegate the operation of, special programs which further the objectives of the Community Services Act.

Objectives

Guiding Objective:

To prepare a social accounting of Oregon's socio-economic conditions through the generation of relevant indicators comparable by geography and subject.

Facilitating Objectives:

A. To gather and review available data in accordance with the following criteria, as this material should be:
    1. In compliance with poverty incidence indicators suggested in the OEO Act of 1964 (see Sections 205 and 210).
    2. Available on a county by county level to facilitate geographical comparisons.
    3. Useful to the various agencies dealing directly with the causes and effects of a depressed socio-economic environment.
    4. Reported periodically or updated by estimates.
    5. Generated from the most recent data available.
    6. Supported or recognized as a valid indicator by authoritative sources.
    7. Through fact or estimate represent the most relevant data available at the time the study was undertaken.

8. In compliance with all laws and regulations regarding individual rights to confidentiality.

B. To integrate all data reviewed into a report format which facilitates an efficient reader overview of socio-economic conditions in any particular County and allows for the periodic insertion of updated material.

C. To provide a first step toward the implementation of a standardized integrated human resource information reporting system with emphasis on Oregon's socially and economically depressed population.

What is a Socio-Economic Indicator?

To understand the "socio-economic indicator", it is necessary to first define "social accounting", of which the socio-economic indicator is a part. Social accounting is the quantitative representation of certain social and economic conditions. For example, the number of persons in any particular county with a fourth grade education or less is considered by the Office of Economic Opportunity to be a social accounting of the functional illiterate population (those without reading skills). If there are large numbers of individuals in the functional illiterate group, this may be an indication that greater effort should be invested in the county to stimulate educational achievement. Where data is available, certain indicators can be developed which, when aggregated, attempt to reflect educational attainment in a particular county. Similar indicators may be developed in such areas as health, housing and public assistance. Thus, various environmental conditions which affect people's lives or are closely related to elements of everyday life can be expressed numerically in the form of indicators and not solely in judgmental or opinionated form.

Whereas, a social accounting system refers to the totality of all social and economic environmental components, i.e., health and housing and education, etc., the socio-economic indicator refers to a major single subdivision of that system (health or housing or education, etc.). Each indicator, in turn, is derived by aggregating its individual components. The infant mortality rate, for example, is one individual component within the health indicator.

A social indicator is perhaps most appropriately defined by Mancur Olson in an unpublished paper entitled "An Agenda for the Development of Measures of the Progress of a Racial or Ethnic Group" dated February 6, 1968, and distributed by the U.S. Department of H.E.W.:

> "An aggregate or representative welfare measure; that is, as a statistic that measures the extent to which some goal of general interest has been achieved (rather than the government expenditures or inputs used to achieve that goal). The indicator can be obtained by aggregating other statistics into a meaningful summary statistic or by selecting from some properly defined set of statistics one series of whose movements are reasonably representative of the rest."

This report provides a look at the human resource balance sheet in Oregon with special emphasis on the poor, county by county.

Report Advantages

A. Extensive narrative has been avoided to facilitate rapid identification of required data.

B. All data has been screened according to the criteria mentioned earlier to insure a better data base. (See Facilitating Objectives, page 3).

C. Characteristics of the social and economically depressed sectors have been gathered from many separate sources and combined into a single, central document.

D. The indicators can be used to identify need areas and provide substantiation for further investigation of apparent problems, especially at the County level.

E. Information gaps can be readily seen through analysis of the data and thus, constructive criticism should evolve concerning the present state of data used for human resource planning.

F. Guestimate planning should be significantly reduced in program planning where insufficient data has previously been a problem.

G. Realistic project parameters can be estimated using the magnitude of the target group provided in this report.

H. Programs with little or no research budget will find this report useful.

I. Problems and opportunities can be compared by County.

J. Searching through many reports to develop a County profile has been significantly reduced.

K. The format allows for development of a comprehensive information retrieval system for updating as more timely and valid data becomes available.

L. Administrative authorities will be better able to allocate resources based on the data provided.

M. Both general category indicators (housing, health, education and so on) and the data components of those indicators are provided for a thorough review and understanding.

N. A format is provided which enables easy insertion and extraction of data.

General Data Considerations

The success of any social accounting system depends upon the data which is available, how that data was derived, and the reliability of reporting procedures. Due to the limitations inherent in the development of a social accounting system, the following list of considerations should be kept in mind while reviewing this report on *Social Accounting for Oregon: Socio-Economic Indicators*.

A. Sources of information are subject to qualifications.

B. No distinction is made between cause and effect indicators. At present, the knowledge to delineate precisely cause from effect does not exist.

C. The reader is encouraged to review thoroughly the data components which make up the overall indices to discern trends, dominant and subservient factors.

D. Misleading comparisons and conclusions could be drawn from data where the *number* of incidences is *small* and/or fluctuate widely. To help alleviate this problem, multiple year data has been employed, where applicable and possible.

E. Each indicator category should be examined in terms of its relationship to other indicator categories. For example, one cannot determine the total number of Oregon's poor by looking only at the welfare case load. Many poor people in Oregon refuse to apply for welfare as they are unfamiliar with programs or refuse to take welfare due to personal reasons.

F. There are many persons receiving assistance from one agency who are also receiving aid from another. Thus, duplications of individuals receiving public assistance may be encountered. The Division of Vocational Rehabilitation estimates that 85 percent of its recipients are known to other agencies. Of course, such a high rate is atypical.

G. Various agencies, such as H.U.D., H.E.W., and C.S.A., use different definitions of poverty. Some definitions are based on "need", some on annual income level and family size, others on a combination of several factors. The number of persons below the poverty level (BPL) used in this report is based on data from the 1970 Census and appropriate poverty threshold guidelines are included so that these figures can be placed in the perspective of that time. However, estimates of poverty populations of living standard requirements from current data in this report should also be referenced to the current income guidelines from the Community Services Administration. The following table presents the latest poverty threshold figures and those for the 1970 Census.

C.S.A. Poverty Guidelines for All States Except Alaska and Hawaii

Family Size	Nonfarm Family		Farm Family	
	1970	1980	1970	1980
1	$1,840	$3,790	$1,569	$3,250
2	2,383	5,010	2,012	4,280
3	2,924	6,230	2,480	5,310
4	3,743	7,450	3,195	6,340
5	4,415	8,670	3,769	7,370
6	4,958	9,890	4,244	8,400
7	6,101*	11,110	5,182*	9,430

---

* 7 or more

For families with more than seven members, add $1,220 for each additional member in a nonfarm family and $1,030 for each additional member in a farm family for the 1980 guidelines.

In general, most of the income guidelines employed by government agencies are similar. No attempt was made to provide a standard poverty definition for this project. Thus, the term "depressed socio-economic conditions" is sometimes employed although the parameters of the indicators used are also found among the higher income levels. The undesirable consequences to which they witness appear magnified and concentrated among the low income groups.

H. Many of the problems faced by the poor have been scientifically documented; many have not. Indicators used in this report have been selected on the basis of various justifications. These include published documents, professional judgment of those who practice in the fields, and historical usage of the indicators.

I. As programs oriented to the poor expand and become more sophisticated, many problems associated with the poor decline in significance. Therefore, in the future, as some problems become less dominant in the poor sector of society, certain indicators now used in this report may be discarded.

J. As new and better data becomes available, the report should be updated. Readers are encouraged to examine source documents to determine if updates are available.

K. As this report is based on the collection of printed material, all other sources of information should be checked prior to making any definite conclusions. The knowledge of those who work directly with the population of concern should be contacted to shed light on the data presented in this report.

L. Some of the data collected for this report is based on a sampling process. Not everyone in a specific population is counted. For example, U. S. Census estimates of the poor population are based on a 20 percent sample. Thus, the reader should be aware that certain error factors are involved when reading the data. Human and mechanical errors also occur in large data gatherings, such as the decennial census.

M. No one will agree with all indicators. A primary objective of this report is to stimulate constructive criticism and discussion of data now used and generated to plan and implement human resource projects.

How the Indicators are Displayed

Indicators and their component data are presented in all or several of the following forms:

1. Magnitude: The incidence or actual number of persons or occurrences which fall within a particular indicator area, i.e., Housing - the number of dwellings built prior to 1939.
2. Rate: The incidence or actual number of persons or occurrences, such as infant deaths, expressed as a number per 100, per 1,000 or per 100,000 persons within a county or the state, i.e., Health - Infant Death Rate per Thousand Live Births recorded in a county according to the residence of the mother.
3. Percent: The incidence or number of persons or occurrences expressed as a percentage of another number or base which is the same as a rate per 100. In this report, several percentages are used

as follows:

a. Percent of county population or total amount:

A number of people or occurrences expressed as a percent of the county population, i.e., Population - the percent that the age group 17 years and under is of the total county population.

b. Percent of change or of a variation over time:

A number or occurrence, representing a latter time or date, is expressed as a percent of a number or occurrence representing a former time, i.e., Population - the percent of a county population change due to migration, in or out, over a calendar year.

c. Percent of an average or rate:

A number or occurrence expressed as a percent of a rate or average, i.e., Health - the first quarter average of ADC cases expressed as a percent of the monthly average of ADC cases for 1979. This percentage is used to show changes in the quarterly averages compared to a standard monthly average for a year. Also, the infant death rate for a county expressed as a percent of the state-wide infant death rate is used to indicate, for example, how all county infant death rates compare to a standard.

4. Rank by Percent: In order to permit comparisons from county to county, the calculated percentages for all 36 counties are ranked according to the size of the percent from high, rank 1, to low, rank 36. The rank is expressed as a whole number or a decimal. When the percentages of two or more counties are identical, they share a common rank which is indicated by an asterisk (*), i.e.,

Population - the rank of the percent of county population of the 17 and under group.

5. Rank by Number: In order to permit the comparison of component data expressed as a number from county to county, an absolute rank is given. The greatest number or magnitude is assigned rank number 1 and the smallest quantity of persons or occurrences is ranked 36 or the highest appropriate number if all 36 counties are not included, i.e., Population - the rank of the number of people in the 17 and under groups in a given county. Note should be taken that rankings are independent of whether the number is negative or positive. Rankings are assigned solely on the basis of magnitude. Caution is needed as in cases in which a lower amount is more desirable than a higher quantity such as the number of people not finishing high school.
6. Graphics: Each county section opens with a graphic presentation in which some data has been translated into graphic form. These graphic presentations are not intended to be a reference source of exact numeric quantities, but rather are designed to convey comparative visual impressions to stimulate further investigation in that area. The type of graphics are as follows:
   a. A map, i.e., county map showing the poverty population in 1970 by census county divisions.
   b. A bar graph, i.e., the infant death rate of each county is compared to that of the highest county rate, the lowest county rate and a state rate. Some bar graphs compare each county with a state average or rate, i.e., unemployment and adjusted gross income.
   c. A population tree, i.e., a graphic of the population by age and sex in which left of the centerline indicates the male population

percentage, the female is to the right of the centerline and increasing age from the bottom toward the top.

Thus two modes of communicating quantitative information are provided for the reader. The graphic mode is intended to allow visual comparison of each county with a standard or standards. The local legislator, administrator and/or planner may find these graphics helpful in highlighting some salient concepts about their own county. Further study may be carried over into the data displayed on the county profile sheets which contain the tabular form of the data. These two modes of quantitative presentation can be very complementary for gaining insights into the local socio-economic picture.

Source, Descriptions and Cautions for the Data

The following section is intended to aid the user to become informed as to the nature of the data included in the report. The data contained in this volume was collected from a variety of sources. The following information in this section should provide an adequate definitive description of the data, tell its source, discuss some needed cautions in terms of validity or reliability issues related to the data and indicate the time period which these data represent.

POPULATION

The population data was prepared for this report by the Center for Population Research and Census (CPRC) at Portland State University. This set of data is based on projection estimates from the 1970 Census.

Age Groups:

The age group data for 1979 are estimates derived from calculations using an adjustment formula developed to make updated projections of populations from the 1970 Census data. The data for individual years 61 through 65 were compiled from a special computer run to estimate single year age groups for each county in Oregon for 1979. Thus users are able to construct population age groups in terms of the elderly to suit their needs.

Urban and Rural:

The data on populations in incorporated and unincorporated areas are also current estimations projected from the 1970 Census and are accurate as of July 1, 1979, which is the latest date for which estimates were available during the preparation of this edition. Five classes of city size are used. The size categories were selected to give the best overall insight into the urbanization factor. The population in each urban category indicates the number of people in one or more urban units of that size and does not necessarily indicate the population is all in one city of that size.

Population Change:

The time period for change used in this edition has been changed from one year to the period between the 1970 Census and July 1, 1979 because of compounded error in single year estimates the longer they are separated in time from the base year. Migration, in or out, is assumed to be population not accounted for by "births" minus deaths".

PUBLIC ASSISTANCE

To indicate present client levels for social service and welfare programs, the data relating to public assistance is presented. All public assistance data in this edition is for calendar year 1979.

It can be used and cross compared with other data indicating potential low income or actual low income populations.

Supplemental Security Income Payments (SSI):

The data in the section "Supplemental Security Income" was obtained from a table 60 in a report entitled "All Recipients by Payments" furnished by Federal Region 10 in Seattle of the United States Department of Health, Education and Welfare, Social Security Administration. This is data collected at the state level and reported to the Social Security Administration for administrative and management uses and compiled and released for public consumption. The data presented in this section represents, for state and county levels, the distribution of federally administered payments to persons receiving Supplemental Security Income as of December, 1978. The county data is based on the number of recipients receiving SSI payments during December who were also eligible for SSI payments as of January 1, 1979.

Aid to Dependent Children, Old Age Assistance, Aid to the Blind and Disabled, General Assistance:

The data relating to Old Age Assistance, Aid to the Blind and Disabled, Aid to Dependent Children and other adult welfare cases, results from data prepared in the Program Data Unit of the Adult and Family Services Division of the Oregon Department of Human Resources (AFS). In local AFS offices, forms are filled out which authorize various kinds of payments to recipients. These payment authorization forms are turned in to the AFS Division, the information on them is inserted into computer files and payment checks are made to the described program recipients. Periodically, computer searches are made through these program payment records and aggregations are made of the data on cases and persons participating in these program benefits.

Food Stamp Recipients:

Data on the Food Stamp Program is obtained by the AFS Division with cooperation from local U.S. Postal Service branch offices. Food Stamp Recipients are provided by local AFS offices with an "authorization to purchase" card which is turned in to a local post office at the time Food Stamps are purchased. These cards are sent to the AFS Division where the information they contain is keypunched and read into the computer records. Later, a total summary is made of data concerning Food Stamp Program recipients.

Congregate Care Recipients:

The count of Congregate Care cases is obtained by a computerized compilation of information on authorization for payment forms which are submitted by local vendor institutions in which the recipients live. For example, a nursing home, being a vendor, would fill out forms requesting authorization of payments for residents within their institution. This authorization request form is sent in to the AFS Division where payments are authorized. These records are also placed into the computer files, periodically counted and summarized into tables.

HOUSING

The data describing the relationship between old housing and currently occupied dwellings was obtained from the Housing Division of the Department of Commerce.

Pre-1939 Dwellings:

Since survey-type data relative to inadequate housing, which appeared in the 1972 edition of this report, is available only through the decennial census, the data on pre-1939 housing is provided as an available substitute. It is assumed that dwellings built prior to 1939 have a greater chance of having structural or system deficiencies causing it to be inadequate for housing purposes. The percentage of pre-1939 dwelling units of all occupied dwellings is a general indicator of inadequate housing.

Annual Permits. Single, Multiple, and Mobile Home Units:

The data relating to single and multiple home dwelling units was obtained also from the Housing Division of the Oregon Department of Commerce. Additionally, reports entitled "Oregon Building Permits 1979-1985" and "Mobile Home Report, December, 1979" were used to obtain data for this edition. The housing data provided by the Housing Division are obtained from county records furnished to them by these local units of government and from a survey of county assessors conducted by the Mobile Home Dealers Association. Much of this data is obtained for the counties by county assessors who operate in the field and observe these dwellings, plus records of placement or building permits applied for at the local county courthouse.

To calculate the 1979 housing inventory, it was assumed 5% of all building permits issued between 1970 and 1979 were not built. To compare housing inventory in previous editions, adjust the 1975, 1976, 1977, or 1978 housing inventories by subtracting 5% of the permits issued. The pre-1939 units are the same but the ratio between "pre-1939" and later units changes because the inventory decreased by 5%.

HEALTH

The data for the infant and crude death rate, low birth weight and trimester of initial prenatal care were taken from tables supplied by the Vital Statistics Section of the Oregon Health Division, Oregon Department of Human Resources. The data is for calendar year 1979. The titles of these tables are as follows:

1. Infant Deaths - By County of Residence and Age at Time of Death - Oregon, 1979.
2. Population, Births and Deaths - By County of Residence - Oregon, 1979.
3. Resident Births by Month When Prenatal Care Began - Oregon, 1979.
4. Single and Plural Live Births by Birth Weight and County of Residence - Oregon, 1979.
5. Resident Immature Births by Birthweight - Oregon, 1979.

The Vital Statistics Section is the official state custodian of records on births, deaths, etc. which occur within the State of Oregon. Live birth and fetal death certificates are generally filled out by hospital personnel. In cases where a birth occurs outside a hospital, the responsibility falls to the person attending the birth. Local health departments are available to help fill out the certificates properly. Death certificates are completed by funeral directors, physicians, or medical examiners. These certificates are turned in to health departments and data is sent to the Vital Statistics Section. The data recorded on these certificates has a very acceptable level of accuracy and reliability. The data named above is residence data, i.e., occurrences recorded and counted within the county of usual residence.

Even births and deaths of residents occurring outside the state are recorded for the appropriate county because of reciprocal agreements with other states.

Infant and Crude Death Rates, Low Birth Weight, Prenatal Care:

In general, there is a relationship between income and prenatal care, birth weight and infant mortality. Poverty population mothers tend to receive prenatal care, if at all, later in pregnancy than more affluent mothers. There tends to be a higher incidence of low weight at birth, at or below 5 lbs. 8 oz. (2,500 grams), and also infant mortality among the poor. The data related to these areas covers the calendar year 1979.

Physically Handicapped, Developmentally Disabled, Alcohol & Drug Dependent, Personal & Interpersonal Maladjusted:

The Vocational Rehabilitation Division (VRD) of the Oregon Department of Human Resources supplied the data on estimated populations in the areas of physically hadnicapped, developmentally disabled, alcohol and drug dependent, and personal and interpersonal maladjusted. The figures were taken from a set of updated tables originally prepared as an aid to counties for completing the Title XX Needs Assessment study. "At risk" and "needs service" population estimates are presented. Estimates of the "Population at Risk" are the result of recent work (1979) with the most sensitive technical methods available and the most current and reliable information available. County census data regarding age, race, sex and family income were applied in the estimation method used. These estimates, for the general population, were made by the Ridge method. Separate estimates were made of the Alcohol/Drug dependent population and the Mentally/Emotionally disturbed population. Institutionalized persons are included in these estimates. Individuals "at risk" are those persons, age 18 through 64, who are partially or completely limited in their ability to carry on their major activity, i.e., work, keep house, go to school, etc. "Individuals needing service" are estimates of the number of individuals in the population at risk who need and could benefit from VRD services and are potential applicants. These estimates are the result of professional judgments which take into consideration such factors as severity of disability and individual desire to gain or maintain employment. Included in the estimates are: 1) the disabled unemployed who are seeking work, 2) the disabled unemployed who are not seeking work but who are interested in working and 3) the disabled employed who need assistance to maintain suitable employment.

EDUCATION

It is generally accepted sociologically and economically that the lower the educational level of attainment of the individual, the lower the earning power and, thus, the lower the income level. Although the strength of this relationship between education and income has weakened slightly in the last decade or two, there is still a sufficiently high correlation between the two to make this data useful. Post high school training other than at college is becoming significant in terms of income potential. Lower educational attainment, especially below the fourth grade level, signals a population who may be a group with high potential for becoming recipients of social service and welfare programs. It is with this in mind that educational data is included in this report.

High School Graduates as a Percent of Ninth Grade Enrollment: Ninth Graders Who Graduate:

The data describing the percent of ninth grade enrollment that graduates from high school was obtained from a table which was furnished by the Oregon State Department of Education and entitled "County Net Enrollment Data - The Measure of Holding Power". The Percentages are derived in the following manner. For the class of 1979, the number of graduating seniors is divided by the enrollment of that class when it was a ninth grade class in the fall of the 1975-1976 school year. The percent obtained indicates the percent of the ninth grade enrollment that is now graduating; not the percent of a particular group of ninth graders. Let us take, for example, the data from Baker County. When the graduating class of 1979 were ninth graders during the 1975-1976 school year, the class enrolled 344 students. In 1979 there were 202 graduating seniors in June. Dividing the graduating seniors, 202, by the ninth grade enrollment from 1975-1976, 344, produces a percentage of 58.7. This data which is derived from state-wide enrollment figures is an attempt to estimate for each county or intermediate education district the retention of high school students from grade nine through graduation.

The methodology employed to obtain these figures for this table is one that is commonly used by other states and by the United States Office of Education to estimate how long secondary students are staying in school. This method assumes that those students entering grade nine can be traced during the next four years to show the holding power of the high school through graduation. In stable communities, this will be fairly clear-cut matter. However, in our highly mobile society, recent figures show that approximately 3,700 high school students change schools each year in Oregon. The Oregon State Department of Education's use of this method can be supported on the basis that immigration approximates emigration in most schools.

One additional point that should be mentioned is that the number of graduates shown reflects the actual number of diplomas issued during the regular June graduation. Not included are the number of graduates, if any, during a summer session or during the middle of a school year. For example, the reporting system that has been used by the Hood River School District fails to reflect early graduates.

Adult Educational Level:

The data on adult educational attainment was derived from the 1970 Census, Table 120 of the Oregon volume. The totals for each educational level were obtained by adding together male and female sub-totals from the zero schooling level up to and including each respective level completed, i.e., fourth, eighth, or third year high school. Thus this data is additive in character.

ECONOMIC

The economic data in this report contains two foci. Firstly, it attempts to describe quantitatively the distribution of income within the population of the state as reported on state income tax returns and on property tax relief applications. Thus, some indication of the size and distribution of low income and poverty populations may be obtained.

Secondly, some selected economic data is furnished to aid in obtaining insights into economic conditions in Oregon counties. By integrating this information, economic factors of particular significance to low income people in a particular county or state-wide may be identified by further study.

Household Income and Adjusted Gross Income:

The Department of Revenue supplied the data on household income from summary records of homeowner and renter property tax relief applications (HARRP) for the year 1978. Because of the nature of the tax relief program application forms, and the newness of the computer programs for this data, the Research and Special Services Division in the Revenue Department accompanied the HARRP data which they provided with the following statement:

> The Homeowners and Renters Refund Program (HARRP) data presented in the attached tables were never intended to replace Bureau of Census or other reputable demographic data; HARRP data have not been subjected to the requisite strict statistical standards used on census data. Coverage is not complete--indeed, it is difficult to ascertain precisely what is the coverage ratio. Data for the lower income ranges should be used with extreme caution as it is believed that the participation rate among these households is lower than for other income ranges. Furhtermore, the reported household incomes for the lower ranges may not be as accurate as for the higher ranges. The HARRP data relies on the self-assessment of the tax payer, and on nonverified key punch data.
>
> The data is made available to the general public only because some (probably mistaken) believe that some data is better than no data. If the statistical tables were sold, instead of published for free, each table would be stamped with the expression, "CAVEAT EMPTOR"--"Let the Buyer Beware".

However, additional factors must be kept in mind which may mitigate the above statement. The census is also a voluntary survey and, additionally, is without the same force of law as have tax programs to urge the completion of the forms accurately. There are legal penalties for deliberately supplying inaccurate answers on tax forms. There is also an incentive, especially for lower income people, to complete the forms in order to obtain refunds. Although there may be great caution necessary in using this data, it may represent the only data of its type available at the present time. It can give general trend indications, but it should not be taken as a source of exact errorless numbers. It should be noted here that the HARRP and personal income tax data reported in this volume have all the negative income or loss returns and out of state returns data removed. The number of negative income returns and negative dollars are subtracted and added respectively from all county and state data. The total property tax relief applications (for 1978) used in this 1980 report minus the ones showing a negative household income number 447,640. Of those applications, 340,263 were filed with state income tax forms and 107,377 were filed separately. As further research and analysis of this data is completed on the applications in future years, a more accurate demographic description of the composition, coverage and variability of this group should be available. Household Income (HI), as used in this report, is that income which is reported by the applicant on property tax applications. It would include adjusted gross income from state or federal form, nontaxable interest and excluded dividends, long-term capital gain deductions, social security and railroad retirement benefits, welfare, unemployment benefits and tax exempt pensions. Since the state tax data is not complete until December, the latest data possible to report in this volume is for 1978 state taxes.

The Adjusted Gross Income (AGI) data is also for 1978 and is derived from published state income tax data tables produced by the Department of Revenue. It is virtually the same AGI as is reported on the federal income tax form. Cautions, also should be exercised in the use of the AGI data, as well as the HARRP income figures. For example, the figures for very low income data would not include low income people whose income is nontaxable or did not have any withholding money for which to apply as a refund. In addition, high school and full time college students applying for tax refunds or renter's tax relief are included in significant numbers in the lower income ranges in some counties. This is especially true in those counties in which colleges and universities are located. The household income and AGI data should be considered as having possible variance but probably usable to show a general picture or trend.

Effective Buying Income and Retail Sales:

The data for 1978 household median Effective Buying Income (EBI), households in EBI groups and figures for retail sales were obtained from the July, 1979 edition of Sales Management Magazine. Each July, an annual survey of buying power is published by this organization. Effective buying income is defined as personal income, wages, salaries, interest, dividends, profits, and property income minus federal, state and local taxes. It includes 1) net cash income, 2) income in kind and 3) imputed income, such as food consumed on the farm that produced it and imputed rent. EBI is generally equivalent to the federal government's disposable personal income, and it is a bulk measurement of market potential. The number of households and other base data are census updates.

Per Capita Personal Income:

The data indicating per capita income was produced by the Bureau of Economic Analysis, U.S. Department of Commerce. This data is compiled from tax and Social Security data and other administrative records. The Employment Division, Oregon Department of Human Resources supplied the copies of the tables.

Median Family Income:

The median family income data for 1979 was supplied by the Housing Division of the Oregon Department of Commerce. It is prepared by the Housing Division for public distribution. It is the middle income of the population in question. That is half of the total number of incomes in Oregon are above and half of the number of incomes are below the median. Note: The word number and not the word amount is used. The median divides the number of incomes into two equal groups of incomes. Median family incomes were estimated as of January 1, 1980, for Oregon counties, as well as the state as a whole. These estimates reflect 1979 income data. The FHA income analysis program was utilized for this update. The methodology employed is outlined below:

1. 1969 family income distributions (from the 1970 Census) were converted to decile distributions. Each decile represents a

10% segment of population. Decile 5 corresponds to the median. The income level at each decile was multiplied by 1.05 (a factor determined by a Census Bureau survey) to adjust for under-reporting errors in the 1970 Census.

2. The family income increase since 1969 was estimated from Oregon Covered Employment and Payrolls data as prepared by the State of Oregon Empyoyment Division. The average wage in all covered industries was computed for 1969 and 1979 (for each county and the state as a whole) by dividing total wages by average yearly employment. The percent increase was computed and applied to the 1969 income level at each decile.

The methodology utilizes the best available information. However, the estimate's degree of accuracy is assumed to be within a range of plus or minus 5%.

Unemployment and Average Employee Earnings:

The Employment Division supplied the raw data for the 1979 unemployment portion of the report and also the figures on the average covered employee earnings for 1979. The civilian labor force unemployment data represents estimates compiled by the Oregon Employment Division of all employed and unemployed individuals 16 years of age and older. The data are adjusted for multiple job holding and commuting. The average employee earnings is computed by dividing the total payrolls covered by the Employment Division Unemployment Insurance Law by the annual average covered employment. The nonagricultural wage and salary employment estimates by industry are based on employers' reports and include all full and part time nonagricultural workers during the pay period including the 12th of the month. These data are estimated on a place of work concept and are not adjusted for dual job holding.

Assessed Property Value:

The assessed property value figures were obtained from the Oregon Department of Revenue for the 1979 tax year. The total true cash value for each county is a total of the value of taxable property equalized by each county equalization board and that equalized and apportioned by the Department of Revenue.

Assessed Taxes and Tax Rate:

The assessed ad valorem taxes per thousand of assessed value was obtained from data from The Department of Revenue which supplied both the ad valorem tax data and the assessment data. The total gross ad valorem levy for each county was divided by the number of units of one thousand of assessed value for each county, to obtain the ad valorem rate per thousand of assessed value.

SOCIAL DISORGANIZATION

The data presented in this section indicates the occurrence of social phenomena which have implications for social service programs. Frequently, low income people who become involved in the occurrences tabulated in this section, also, become or already are involved with social service programs. This happens because of the lack of alternatives open to them due to limited, reduced or nonexistent financial resources perhaps as a result of being divorced or arrested, etc. In the case of divorce, for example, the participants may find themselves in a significantly lower income level due to the need to share the financial resources between two households which were formerly kept within one household. For these and other reasons people involved in divorce or other phenomena in the social disorganization area may be potential clients or participants in human service programs. The component data in this indicator area are for the year 1979. However, some 1978 data is included for trend analysis purposes.

Index Crimes:

The data on Index Crime was obtained from the State Law Enforcement Council. Each local police agency sends information on criminal offenses, committed within it's jurisdiction, to the Law Enforcement Data System (LEDS). LEDS compiles the data into monthly, quarterly, six-month, and annual summaries. The summaries are then returned to the local police agencies and are available to other state agencies and the public through published reports. Prior to 1979, Index Crime consisted of the seven major offenses of: Murder, Forcible Rape, Robbery, Aggravated Assault, Burglary, Larceny, and Motor Vehicle Theft. Beginning January 1, 1979, Arson was added to the list of Index Crimes.

Divorces, Illegitimate Births:

The data on divorces and illegitimate births was obtained from tables for calendar year 1979 provided by the Vital Statistics Section of the Oregon State Health Division. The Vital Statistics Section is the officially designated state custodian of records on Vital Statistics such as births, marriages and divorces which occur in Oregon. The number of divorces, the rate of divorces, and ratio of dissolutions of marriages data were obtained from a table entitled "Marriages and the Dissolution of Marriages (including annulments) by County of Occurrence, Oregon 1979". Data on marriages and divorces are compiled from tabulations of occurrences listed on official legal documents and certificates collected at the local level and provided in summary form to the Vital Statistics Section. Marriage certificates are recorded by county clerks, who send them to the state office after the marriage has been performed. Court clerks send in the dissolution of marriage certificates after a judge has granted the court decree. The data for illegitimate births is taken from a table entitled "Illegitimate Births by County of Residence of Mother and by Race, Oregon 1979". Birth certificates are generally filled out by hospital personnel. In cases where birth occurs outside of a hospital, the responsibility to submit a completed birth certificate falls to the person attending the birth. The local county health departments are available to help to record the required information on the certificate correctly. Birth and divorce statistics are collected on both an occurrence and a residence basis. Occurrence figures represent every event that takes place in the State of Oregon, regardless of the usual residence of the individual. The birth data reported in this section of the report is compiled on the basis of residence. That means the event is recorded and its county designation is assigned according to the usual in-state residence of the involved individual. Oregon has an exchange system with other states in the United States, whereby they send notification of births to Oregon residents that occur outside the state and the State of Oregon reciprocates with birth certification information for the residents of other states. In this way, it is possible to tabulate and keep birth information for all Oregon residents. The reciprocity system does not yet include marriage or divorce certificate information exchange, however. For this reason Oregon has a very high divorce to marriage ratio as may be observed in the county data. Many Oregonians go to other states to marry but divorce residency laws tend to cause them to seek divorces in the State of Oregon.

MIGRANTS

The estimated number of inter and intra state migrants for 1979 in the Employment Division's mid-month survey, which is included in this volume, was obtained from a table prepared by the Research and Statistics Section of the Employment Division of the State of Oregon. The estimates used were obtained from a table entitled "Estimated Number of Hired Seasonal Agricultural Workers; By Selected Crop Activity and Source of Worker of Oregon's Nine Agricultural Areas; Reporting During Semi Monthly Periods for 1979". (A seasonal agricultural worker is an individual who is working on an agricultural job that is expected to last less than 150 days.) The number of inter and intra state migratory workers which appears on this table are obtained by sample survey technique. At two times during the month, usually the 15th and 30th, a random sample of agricultural producing units within each of the nine agricultural areas is selected. On these two days of the month, a sample is taken by counting the workers and obtaining this information. The local agricultural establishments report the results to the area office. This data indicates the level of employment of inter and intra state migratory workers on the single date of the survey only, and does not necessarily show either a peak or an average employment for the month.

Because of many variables involved such as weather, crop maturity, availability of workers, and market influence, employment fluctuates continually and at times very widely. This data should not be interpreted as an exact count of the workers employed over any given period of time within any given agricultural area. There is a degree of sample error which may be due to the factors previously named. Since this data is subject to variability it should be interpreted as trend data only.

The best use of this material is found in comparing the data over several years in order to obtain some concept of trend. This is the reason that data from the years 1970, 1972, 1975 and 1979 are included in this report.

A summary table follows for quick reference to the source and year of coverage of the data in this report.

SUMMARY OF DATA DESCRIPTION

DATA	SOURCE	YEAR
Population		
age groups: 0-17, 18-64, 65 and over	Center for Population Research and Census Portland State Univ. Portland, Oregon	estimates for 7/1/79
individual years 61,62,63,64,65	"	estimates for 7/1/79
urban and rural	"	estimates for 7/1/79
population	"	from 7/1/77 to 7/1/79
Public Assistance		
supplemental security income payments	Social Security Office Salem, Oregon	for calendar year 1978
old age assistance, aid to the blind and disabled, ADC, general assistance and food stamp recipients	Adult & Family Services Dept. of Human Resources State of Oregon	for calendar year 1979
Housing		
pre-1939 dwellings single and multiple family dwelling units	Housing Division, Dept. of Commerce, State of Oregon	for calendar year 1979
mobile home units	"	for calendar year 1979
Health		
death rates, birth weight, prenatal care	Vital Statistics Section Health Div., Dept. of Human Resources State of Oregon	for calendar year 1979
handicapped, disabled dependent and maladjusted populations	Vocational Rehabilitation Division, Dept. of Human Resources, State of Oregon	for calendar year 1979

Education

9th graders who graduate from high school	Dept. of Education State of Oregon	for classes of 1978 and 1979
adult educational attainment	U.S. Census	1970

Economic

homeowners and renters tax relief data on household income, and state income tax data on adjusted gross income	Dept. of Revenue State of Oregon	for calendar year 1978
effective buying income	Sales Management Magazine Annual Survey of Buying Power	for calendar year 1978
per capita personal income	Bureau of Economic Analysis, U.S. Dept. of Commerce	for calendar year 1978
median family income	Housing Division, Dept. of Commerce, State of Oregon	for calendar years 1969 and 1979
Unemployment	Employment Division Dept. of Human Resources, State of Oregon	for calendar years 1978 and 1979
transportation disadvantaged	Dept. of Transportation State of Oregon	for calendar year 1972
retail sales	Sales Management Magazine Annual Survey of Buying Power	for calendar year 1978
average employee earnings	Employment Division Dept. of Human Resources, State of Oregon	for calendar years 1978 and 1979
assessed property value	Dept. of Revenue State of Oregon	as of January 1, 1979

assessed ad valorem taxes per thousand of assessed value	Dept. of Revenue State of Oregon	for the 1979 tax year
Social Disorganization		
index crime	Oregon Law Enforcement Council, State Planning Agency, State of Oregon	for calendar year 1979
divorces and illegitimate births	Vital Statistics Section Health Division, Dept. of Human Resources, State of Oregon	for calendar year 1979 and for 1978 and 1979 respectively
Migrants		
inter and intra state migrants	Employment Division Dept. of Human Resources, State of Oregon	for 1970, 1972, 1975 and 1979

Guidelines For Using This Report And Understanding The Format Of The Profile Sheets

1. The intent of the Community Services Program is that this report should not be viewed primarily as a reference volume but as a planning tool to benefit low income people.

The best use of this report will result if through study of its content, potential and current problems are spotlighted and socio-economic needs are identified. This should lead to further study of other information at the state and local level. As a result, priorities can be established, resources allocated, and programs and projects mounted to help those living in depressed socio-economic conditions.

2. Data sets in this report should be used in combinations as well as singly.

Frequently, the magnitude or nature of a socio-economic condition in a county cannot be better understood until several sets of data are placed together so that possible inferences can be drawn. For example, when data related to the elderly population in the population section is combined with data related to congregate care, old age assistance and supplemental security payments in the public assistance section, a new concept of the potential needs of elderly folks may emerge.

3. Data from this report should be used in concert with information from other sources.

Since the data in this report has been selected on a representative basis rather than a comprehensive basis, the user is encouraged to seek additional information from other sources. Frequently, the state agencies which supplied most of the data in this edition can provide additional useful information.

4. In some cases, the form of the data recorded on county profile sheets does not fit exactly the headings at the top of the four columns on the right side of these pages. Usually in such cases, a phrase in the text on the left side of the page will tell what the numbers mean.

For example, observe that in the public assistance section for Baker County, the quarterly average of cases receiving aid to dependent children is reported. Further note that this quarterly average is expressed as a percent of the monthly average for the year of 1979. Since this number refers to cases or families rather than individuals, the column heading called "Percent of County Population" is not appropriate to describe a percent of monthly average of cases. So the phrase "Percent of Monthly Average" is placed in the text on the left to describe this percentage. In this case, the phrase on the left, "Percent of Monthly Average," overrides the heading at the top of the column, "Percent of County Population". Frequently, on the county profile pages, the heading "Percent of County Population" is not appropriate for a specific percentage so a phrase at the left is inserted to tell the user what the number in that column means. (See the second page of data for any county for an illustration of the above example.)

On the third page of county data, pre-1939 dwellings are expressed as a percent of 1977 occupied dwellings. The percentage is placed in the third column but the phrase to the left, not the column heading, describes this data.

Glossary

GLOSSARY

(In Alphabetical Order)

1. Adjusted Gross Income (AGI): Income including wages, salaries, tips, interest, dividends, farm and business income before taxes and deductions which is reported on both Federal and State income tax forms.
2. Alcohol-Drug Dependent: Persons who exhibit a lack of self-control in the use of alcoholic beverages and/or drugs so that health may be substantially impaired or endagered or social and/or economic functions substantially disrupted.
3. BPL: Below poverty level; poverty as defined by the Federal CSA program.
4. Cases: In general, cases refer to a group of persons such as a family receiving some form of public or private assistance either in the form of transfer payments (money, food, etc.) or counseling/guidance.
5. Component: The individual type of data which when aggregated make up an Indicator Variable. Low birth weight is a component of the indicator, "Health."
6. Congregate Care: Welfare cases in skilled nursing homes and intermediate care facilities (semi-skilled and homes for the aged).
7. Crime, Index: Includes the total number of reported crimes in a group of the eight major offenses: forcible rape, criminal homicide, robbery, aggravated assault, burglary, larceny, auto theft and arson.
8. Crude Death Rate: Recorded deaths of adults and children expressed as a rate indicating the number of deaths per thousand people.
9. Divorces: A court decree dissolving a marriage. All divorces are by county of occurrence.
10. Dwelling Unit: A house, apartment, a group of rooms or a single room occupied or intended for occupancy as separate living quarters, same as housing unit.
11. Effective Buying Income (EBI): Personal income after deductions for Federal, State and local taxes which may be used for discretionary consumer spending.
12. Employee Earnings: Gross earning paid employees covered by unemployment insurance law, including Federal and State deductions.

13. Families: Two or more persons related by blood, marriage or adoption and customarily living in the same dwelling unit. Members of a second family in a dwelling unit, unrelated to the first, were tabulated as unrelated indivuduals, not as a family.

14. Homicides: Includes both murder and non-negligent manslaughter.

15. Household Income (HI): The total income of the taxpayer or taxpayers and includes all taxable and nontaxable wages, salaries, business and farm income, interest and dividends, gain or loss from property sales, pensions, rents, partnership income, Social Security, welfare, unemployment and the 50% long-term gain deduction.

16. Households: Families and unrelated individuals living outside institutions such as barracks, jails or dormitories. Roomers, however, are included if not over five in number.

17. Housing Units: A housing unit is a house, apartment, i.e., a group of rooms, or a single room occupied or intended for occupancy as separate living quarters.

18. Illegitimate Births: Includes all births outside of wedlock and are compiled by county of residence of the mother.

19. Income: Regular gross cash income from any source, before taxes and excluding windfall profits and losses (such as insurance lump sum benefits). Non-cash income, such as home-grown food, or food stamp benefits, is excluded.

20. Indicator: The overall classification for which component data is developed, i.e., Health, Housing, Education, etc. are indicators.

21. Individuals Needing Service: Estimates of the number of persons in the risk population who need or could benefit from Department of Vocational Rehabilitation services and are potential applicants.

22. Individuals Served: Counts by subcategory of the number of county residents served by VRD from December 1, through November 30, (status 02 through 30).

23. Infant Mortality: Death of a child prior to the first birthday.

24. Legally Blind: Having 20/20 vision in the best eye with the best correction, or having a restricted visual field of 20% or less.

25. Median Family Income: The median income is the amount which divides the distribution into two equal groups, one having incomes above the median and the other having incomes below the median. For families and unrelated individuals, the median income is based on the distribution of the total number of families and unrelated individuals.

26. Migrant, Interstate: Individuals employed in agricultural labor for less than 150 days per year who enter Oregon from another state for the purpose of that labor.

27. Migrant, Intrastate: Individuals employed in agricultural labor for less than 150 days per year who have permanent residence in Oregon although while working in agriculture do not go home in the evening.

28. Migrants, Number of: Number of migrant workers in any particular county during the harvest season as measured by the Oregon State Employment Division during the day on which the count was made. Data indicates the level of employment of the single date of survey per month and do not necessarily show either peak or average employment for the month. Because of the many variables involved, such as weather, crop maturity, availability of workers, and market, employment fluctuates continually, and at times, widely.

29. Natural Increase: Population gain due to more births than deaths.

30. Net Out Migration: Population loss computed as the otherwise unaccounted for loss of population from a county in which the natural increase in a county over time is greater than the population at the end of a specific period; i.e., July 1, 1977 to July 1, 1978.

31. Old Age Assistance: Old age assistance is a state supplement to SSI. Consult the income maintenance section of the State Department of Adult and Family Services for further details about OAA.

32. Personal or Interpersonal Maladjusted: Persons who have psychologically or psychiatrically diagnosed diseases or conditions which significantly limit or impair the major function of an individual (work, keep house, go to school).

33. Population at Risk: Persons 18-64 who are more likely to become partially or completely limited in their ability to carry on their major activity (work, keep house, go to school). Institutionalized and non-insitutionalized persons are included.

34. Poverty (The Poor): Those were classified as poor in the census whose 1969 cash incomes were below the 1970 thresholds or are below current thresholds (see page 8 for current thresholds).

	Nonfarm 1970	Farm 1970
1 Person (unrelated individuals)	$1,840	$1,569
2 Persons	2,383	2,012
3 Persons	2,924	2,480
4 Persons	3,743	3,195
5 Persons	4,415	3,769
6 Persons	4,958	4,244
7 Persons	6,101	5,182

35. Profile Sheets: The sheets of data at the State and County level.

36. Public Assistance Income: As defined by the U.S. Census, this includes cash receipts of payments made under the following public assistance programs: general assistance, aid to the blind and aid to the permanently and totally disabled. Separate payments received for hospital or other medical care are excluded from this item.

37. Physically Handicapped: Persons whose major function (work, keep house, go to school) is limited because of a physical impairment, such as blindness, cystic fibrosis, amputation, etc.

38. Recipients: Persons receiving some form of public or private assistance.

39. Rural Population: Population living in unincorporated areas, either farm or rural nonfarm dwellings according to U.S. Census classifications.

40. Socio-Economic: A reference term used to describe the general environment in which one lives.

41. Supplemental Security Income (SSI): Payments through Social Security to blind and/or disabled of any age and to those 65 and over which bring income of eligible persons to a minimum SSI level. The SSI level is intended to be a national standard. The amount of SSI supplement to aged, blind and/or disabled persons is individually determined and automatically rises in relation to the consumer price index. Consult the income maintenance section of the State Department of Adult and Family Services for additional information about SSI.

42. True Cash Value: As determined by the Oregon State Tax Commission, assessed land value.

43. Unemployment: Average annual unemployment rate based on a percent of those in the civilian labor force.

44. Urban Population: Population living in a legally incorporated area.
